

1. Introduction

1.1. Background

Many recent surveys have indicated that, in general, Indians move out of their country for studying or working abroad, in the last few decades. These claims are supported by various organizations. Important portfolios have been acquired by many talents from Indian origin like Google, Microsoft etc. In this process, they move quite a lot in their lifetime. This brings us to the question: Do people move until they find a place to settle down where they truly feel happy, or do our priorities change over time and progressing age, prompting us to eventually leave a town we once called home for a new area that will bring us satisfaction or do we too often move to a new area without contemplating exactly what we're getting into, forcing us to turn tail and run at the first sign of discomfort?

To minimize the chances of this happening, we should always do proper background research when planning our next move in life. Consider the following factors when picking a new place to live so you do not end up wasting your valuable time and money making a move you will end up regretting. Safety is a top concern when moving to a new area. If you do not feel safe in your own home, you are not going to be able to enjoy living there.

1.2. Problem

London is among the popular choices for the Indians for setting abroad, especially for the people belonging to the Eastern and Northern parts of the country due to the familiarities as a city and as a way to improve the standard of life. This project aims to select the safest borough in London based on the total crimes, explore the neighborhoods of that borough to find the 10 most common venues in each neighborhood and finally cluster the neighborhoods using k-mean clustering.

1.3. Point of Interest

Expats who are considering to relocate to London will be interested to identify the safest borough in London and explore its neighborhoods and common venues around each neighborhood.
